Stats

Stats are extremely crucial for any database

It helps us

- see how our DB is performing
- automate precautionary actions
- monitoring and alerting

We can see Redis stats through command `INFO`

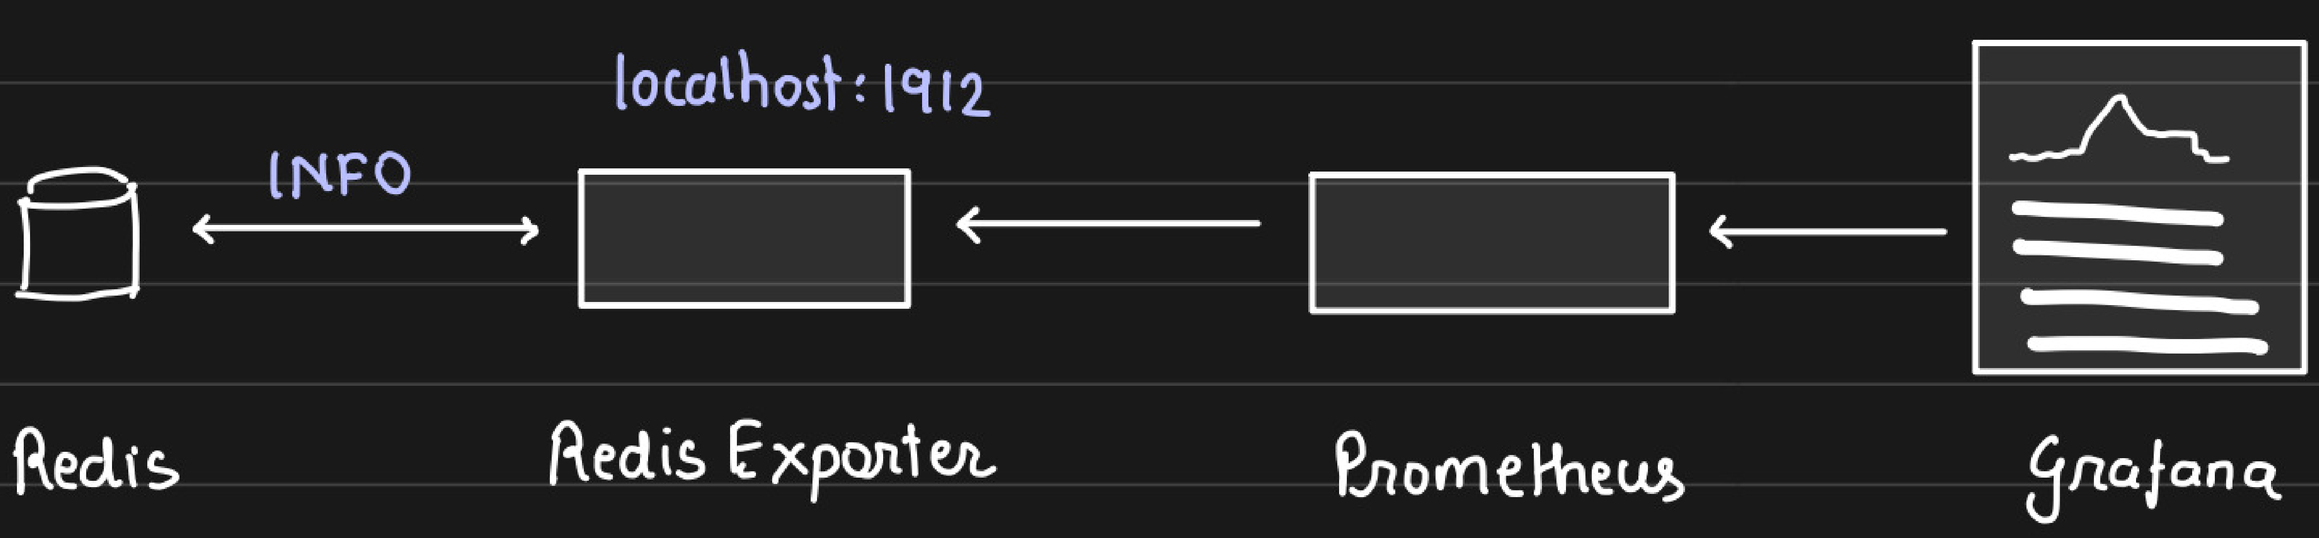

The `INFO` command

Spits out server stats and `INFO` in a parsable format

Bulk string that contains Section and field:value terminated by \r\n

```
# Keyspace
db0:keys=4 \r\n
db1:keys=17 \r\n

# Server
```

Makes `INFO` call and constructs metrics in the "prometheus" format

Periodically pulls metrics from Redis Exporter
